

# Craftex Product Specification Sheet

## CONTOUR 400 DS E-Line

This is a professional single disc machine, electrically powered and with belt drive, available in a 43cm working width version.

The "belt brush traction" ensures high speeds; this technical solution is used to obtain the 180rpm dual speed version, activated by the simple push of a button - for polishing operations.

The belt transmission makes these single disc machines extremely noiseless, enabling the operator to work in full acoustic safety. This means that these machines can be used also in environments where the utmost discretion is required during cleaning operations, such as care homes and hospitals.
